Features of the STEP 150

The JUMA STEP 150 is the newest generation of escalator cleaning machines. Manufactured in Germany by JUMA, the same factory that produced the Rotomac for more than 20 years.

The STEP 150 has all the features and benefits of the Rotomac but much more.

JUMA's highly trained team of engineers have incorporated the following major changes of the Rotomac 360 to now easily make the STEP 150 the best designed and manufactured machine in the world:

Feature	Benefit
18 brushes instead of 15	more efficient and faster cleaning process
New brushholder	More pressure on the steps and therefore faster cleaning Cleaning area between horizontal and vertical surfaces increases
New brushes	Better removal of the liquid from the steps More bristles in brush for better cleaning results
Cleaning time adjustment	You can choose cleaning times between 12 and 60 seconds to clean more efficient Because of faster cleaning you save: <ul style="list-style-type: none">- Personal costs per escalator- Cleaning chemicals- Cost for consumables Clean more escalators per shift to get more turnover per shift
Water adjustment	Reduces the amount of cleaning chemical that you need to clean escalators
Touch display with manuals	Information about how to clean can be seen via: <ul style="list-style-type: none">- PDF (user manual)- picture manual- video of how to use the machine

STEP 150 with Touch Display - more efficient than ever

Thanks to the new and innovative control of the STEP 150 with touch display, you can clean escalators even faster and more efficiently than before. This is possible by the changeover of cleaning programs to cycle times. You have the option to choose cleaning cycle times between 12 and 60 seconds. In order to give you the security for a good cleaning result, all parameters are adapted to the cycle runtime in the background.

The newly developed brush system also allows shorter cycle times to be used than before. In addition, the area between the single steps of the escalators is cleaned even more in depth.

The benefits at a glance:

- Fast and efficient cleaning by precisely adjusting the running time
- Safety by stored parameters for the individual cycle times
- Instructions can be viewed on the display
- Help for various topics can be called directly from the display
- Service notifications will be shown on the screen.

How can the STEP 150 help you to improve your business

Thanks to the new and innovative control of the STEP 150 with touch display, you can clean escalators even faster and more efficiently than before. This is possible by the changeover of cleaning programs to cycle times. You have the option to choose cleaning cycle times between 12 and 60 seconds. In order to give you the security for a good cleaning result, all parameters are adapted to the cycle runtime in the background.

The newly developed brush system also allows shorter cycle times to be used than before. In addition, the area between the single steps of the escalators is cleaned even more in depth.

Benefit in numbers:

steps installed in a escalator: 75 steps

Cleaning program for STEP 150: 20 sec

Bring the machine to the next step: 15 sec for both

- ✓ Cleaning with the STEP 150 can save cleaning chemicals
- ✓ Due to lower cleaning times you also save maintenance costs
- ✓ Lower consumable parts wear which saves money
- ✓ Lower personal costs per escalator
